

Practical session 14

This work should be completed before the next lecture.

Task 1: Use Callables and an ExecutorService

Copy your NetBeans project from Task 3 of Week 13.

Change the `Producer` and `Consumer` classes into `Callables` instead of sub-classes of `Thread`.

Modify the `main()` method so that it uses an `ExecutorService` to run instances of the `Producer` and `Consumer` classes.

Portfolio requirements:

- The NetBeans project for this completed task

Task 2: Catch up

Use the rest of your time on the module this week to complete any previous tasks you have not yet finished.
